

16 OCTOBER 2020

Open letter: Velan Studios' commitment to privacy on AR developments

Dear Mr. Guha Bala and Mr. Karthik Bala,

We are writing to you in light of the recently announced launch of *Mario Kart Live: Home Circuit* designed in partnership with Nintendo, which could have serious implications for the privacy of our homes and the protection of our personal data.

Video games and gaming platforms impact human rights in many ways. Nearly ten years have passed since a massive hack [brought the world's attention](#) to the sheer amount of data held in your sector, demonstrating your power over personal privacy and security. At the same time, gaming has proven to be an important [platform for social, cultural, and political advocacy](#).

At Access Now, we defend and extend the human rights of users at risk. We seek to advance laws and policies to ensure the protection of users' fundamental rights. One of the main areas of our work is data protection in the digital age. Companies' products, applications, and services often gather an enormous amount of data from and about users and their surroundings. We seek to ensure that people remain in control of their personal information, that their data rights are enforced, and that companies process only as much personal data as they need for their product to function. Private companies carry a responsibility to respect and promote users' rights, beyond complying with local law, and Velan Studios is no exception.

While augmented reality promises to open a range of new possibilities for gaming, it also has the potential to amplify risks and create new ones. In the case of *Mario Kart Live: Home Circuit*, we understand that it must create a detailed map of users' homes in order to function. This raises many concerns regarding users' privacy. In our understanding, significant amounts of information about the players (including children), their location, and their homes and surroundings may be processed as they pilot Mario and Luigi around their sitting rooms or kitchens. Our homes are our castles, and we need up-to-date safeguards to keep Bowser out.

Previous augmented reality games, such as [Pokémon Go](#), presented serious concerns regarding the amount of data collected on users. With this latest venture into augmented reality gaming, we want to make sure that users are protected from the start.

Velan Studios has yet to provide detailed information regarding the privacy protections that will apply to the use of *Mario Kart Live: Home Circuit* or any steps you have taken to identify and mitigate privacy risks that could arise. In fact, the current brief privacy policy available on your website barely provides any information regarding how you handle personal information and is in dire need of upgrading. To assist in this process, we ask you to provide us with answers to the following questions:

- 
- **Did Velan Studios conduct any human rights due diligence or review to identify the potential privacy, security, or safety risks of mapping users' homes? What steps were taken to mitigate or prevent these risks?**
- 
- **What information is processed (collected, used, accessed) to create the map of where the circuit will be placed?**
    - Please provide details as to whether Velan Studios or any of your devices will access information for the setting up and/or use of *Mario Kart Live: Home Circuit*, including information from home WiFi and routers, connected home appliances, smartphones, and any other terminal equipment.
- 
- **Will any other information be processed in order for the game to work and/or for its full functionality?**
- 
- **Will Velan Studios use this data for any other purpose than allowing for the game to work?**
- 
- **Where will any data collected be stored? Will all processing be done locally, or will data be sent to the cloud?**
- 
- **If any data will be stored outside the user's device, which data security measures are you going to use to protect the information from unauthorized access?**
- 
- **Would any of the processed information be available and/or accessible to third parties, or companies other than Nintendo or Velan Studios?**
    - Nintendo and Velan Studios should disclose their policies for processing third-party requests for user information, including the number of government requests for user data you receive by country, with compliance rates, and your procedures for responding to these requests.
- 
- **Under which jurisdiction will the processing of data take place? Who will be the controller for the processing?**
- 
- **Will any of the processed data be transferred between different jurisdictions where Velan Studios operates, and if so which legal mechanism will be used for such transfers?**
- 

Furthermore, any company that collects data on users should report publicly on third-party requests for user information through a [transparency report](#). Such reports educate the public about company policies and safeguards against government abuses, and contribute to an understanding of the scope and scale of online surveillance, network disruptions, and a host of other practices impacting our

**16 OCTOBER 2020**

fundamental rights. As a company that provides services that impact user privacy, it is necessary for Velan Studios to also disclose its policies and procedures protecting the data and accounts of everyone interacting with its services through a regular transparency report.

We would greatly appreciate your response by **Friday, October 30** and look forward to receiving any other information you consider to be relevant. We would welcome the opportunity to engage with you and your team to help Velan Studios become a leader of the gaming sector in respecting human rights.

Sincerely,

Daniel Leufer
